COMPLETE PACKAGE:

Posiflex Standard: £2,500 including vat
Posiflex Customised: £3,200 including vat

AURES Standard: £2,890 including vat
AURES Customised: £3,600 including vat

The Standard Package does not include customisation.

Software Overview

UK Call Handler Software will provide and display the telephone number calling you, and provide integration with our Call Handling Software. UK Call Handler Software includes everything you need including Post Code software and modem. You receive a telephone call and the software will check the telephone number within the SQL Customer database.

It will look for all saved telephone numbers including land-line and mobile. The software will store all the telephone numbers relevant to that client, which could include Home, Work, and Mobile etc. If the telephone number is "recognised", then UK Call Handler Software will immediately load that customer's details, including Call History, List of Orders etc.
